Emergency Training Simulator POC

Markdown documentation PDF copy

Security policy for this POC

Source: SECURITY.md

Markdown stays editable. This PDF is the reading/share copy.

Boundary: this project is still a POC, not operational guidance.

Security policy for this POC

This repo is a local proof of concept, not a production system.

That means the security goal right now is modest:

Keep the demo safe enough to run locally, make trust boundaries clear, and avoid building habits that would become dangerous later.

Supported version

Only the current main branch is maintained.

What to report

If you find a security issue, open an issue or contact the repo owner directly.

Useful things to report:

- ways to write logs outside logs/sessions/
- ways to bypass message validation
- ways to make replay produce a different result from the original run
- places where client input is treated as trusted truth
- dependency or packaging risks

Current security limits

This POC does not currently include:

- authentication
- authorization
- TLS setup
- user accounts
- role-based access
- cloud deployment security
- production log retention
- sensor security
- Unreal client hardening

Those belong in later slices, after the local backend loop is stable.
