ADR 0001: Prove a Local Vertical Slice

Source: docs/adr/0001-poc-vertical-slice.md

Markdown stays editable. This PDF is the reading/share copy.

Boundary: this project is still a POC, not operational guidance.

ADR 0001: Prove a Local Vertical Slice

Status

Accepted for the POC.

Context

The bigger idea touches AI, simulation, sensing, rendering, networking, and deployment. If we try to build all of that at once, we will not know whether the basic action-to-state loop actually works.

Decision

First, prove one local loop:

```
stub action -> deterministic state update -> validation -> client message -> log
```

Consequences

We get a real end-to-end path early. Bigger product questions stay parked until the core loop is solid.
