Boundary: this project is still a POC, not operational guidance.

ADR 0002: Build the Deterministic Engine Before LLM In

Status

Accepted for the POC.

Context

LLMs can be useful later, but they add uncertainty. If state changes are generated unpredictably, bugs become harder to explain and replay.

Decision

For the first slice, scenario state changes come only from versioned scenario data and deterministic code. There are no real LLM or external AI calls.

Consequences

Runs are easier to test, replay, and debug. If AI-assisted authoring or adaptation is added later, it should produce bounded suggestions that still go through review and contracts.
