Emergency Training Simulator POC

Markdown documentation PDF copy

Logging and data handling

Source: docs/security/logging-and-data-handling.md

Markdown stays editable. This PDF is the reading/share copy.

Boundary: this project is still a POC, not operational guidance.

Logging and data handling

The POC writes local JSONL session logs under:

```
logs/sessions/
```

JSONL means one JSON object per line. It is useful for replay because each event can be read in order.

Current log contents

Logs may include:

- timestamp
- session ID
- scenario ID
- sequence number
- event type
- inbound trainee action message
- validation result
- state snapshot

Current privacy rule

Do not put real personal, medical, patient, trainee, or operational data into this POC.

The demo uses stubbed data only.

Git rule

Session logs should usually not be committed.

The repo keeps logs/sessions/ ignored so local demo runs do not accidentally become repo history.

Future questions

Before this becomes anything beyond local demo work, I need answers for:

- What data is allowed in logs?
- How long should logs be kept?
- Who can read logs?
- How are logs deleted?
- Should logs be anonymized?
- Should review summaries hide raw event details?
- How do I handle real trainee names, if they ever appear?

Simple rule for now

Use fake IDs. Keep logs local. Do not store real emergency, patient, or trainee data.
