Emergency Training Simulator POC

Markdown documentation PDF copy

Review summary format

Source: docs/ux/review-summary-format.md

Markdown stays editable. This PDF is the reading/share copy.

Boundary: this project is still a POC, not operational guidance.

Review summary format

The review summary is one of the strongest proof points in the POC.

The goal is not just:

The demo ran.
The better goal is:

The system can explain what happened.
That matters for Dr. Cameron because the project is easier to evaluate when the output shows the reasoning trail clearly.

What the review should answer

A good review should answer:

- What session ran?
- What scenario ran?
- What actions happened, in what order?
- What did validation return?
- What was the final phase?
- Did the scenario end?
- Did replay verify the log?
- Were environmental cues handled?
- What warnings or errors should be discussed?

Current review sections

The human-readable review is organized as:

1. Session basics
2. Final state and outcome
3. Replay verification
4. Action timeline
5. Environment cues
6. Warnings
7. Errors
8. Key observations
9. Reviewer takeaways

Why this format works

The format separates facts from interpretation.

Facts:

- action order
- validation status
- final phase
- environment object state
- replay result

Interpretation:

- key observations
- reviewer takeaways

This keeps the review useful without pretending to be clinical scoring, firefighter protocol authority, or EMT guidance.

Example takeaway

Good:

The trainee attempted to enter while the entry door was still closed, so the POC validation layer returned a warni
Avoid:

The trainee failed the emergency response.
The first sentence explains the software behavior. The second sentence overclaims.

Current command

Run:

```
python scripts\summarize_log.py logs\sessions\<session-id>.jsonl
```

For raw structured JSON:

```
python scripts\summarize_log.py logs\sessions\<session-id>.jsonl --json
```
