FIELDWORK: project update - October 28, 2026

ONE-PAGE HANDOUT

Project packet / quick read for Dr. Cameron

WHAT THIS IS

- Local studio toward editable emergency environments.
- Natural-language planning and asset preparation.
- Backend-owned state, evidence and review.

WHAT WORKS TODAY

- Hosted ARC room plans and seeded chair layouts.
- User-confirmed Blender rooms and Unreal Chaos demos.
- Session rules, JSONL replay and instructor review.

CURRENT DEMO

- Run the web app with --port 8772.
- Show saved layouts and the accepted chair.
- New asset controls show actual connection/job state.

CURRENT SCENARIO

- Room demos reuse the reviewed wooden chair.
- Chair/couch variants have an implemented asset lane.
- Mixed-furniture room bindings remain next work.

BOUNDARIES

- First automated couch and generic engine import pending.
- No clinical, protocol or calibrated physics claim.
- No production hosting, sensing or live adaptation.

NEXT DIRECTION

- Complete SSH setup; run and review the actual couch.
- Check Unreal materials, collision cooking and recording.
- Integrate reviewed mixed-furniture rooms.

MAIN TAKEAWAY

Natural language to reviewable assets is implemented; live acceptance and complete mixed rooms are the next checks.
